Profile

Fullstack Developer with experience in developing end-to-end applications using structured and maintainable architectures. I have hands-on experience in managing backend systems, databases, APIs, as well as frontend and mobile integrations in accordance with development standards. I am accustomed to working with production systems that require stability, performance, and operational reliability.

Skills

Languages: Golang, PHP, Dart, SQL.

Frameworks & Libraries: Laravel, Vue.js, Nuxt.js, Flutter, Tailwind CSS.

Infrastructure & Tools: Git, Docker, MySQL, PostgreSQL, Firebase, RESTful APIs, Linux.

Work Experience and Organization

Technical Mentor (Mobile Development) | SMK IDN Boarding School, Bogor(hybrid) 2024 – 2025

- Designed and led an intensive technical class on Mobile Development (Flutter/Dart), creating a curriculum that covers Git workflows, State Management (Bloc), and REST API best practices.
- Conducted code reviews and debugging sessions to enforce clean architecture standards.

Fullstack Developer | PT. Hyperdata Digital, South Jakarta 2024 – 2025

- Architected scalable full-stack solutions using Golang, Laravel and Vue.js, implementing database indexing and API refactoring to minimize latency for high-volume transaction modules.
- Eliminated manual payment verification, ensuring real-time transaction settlement.

Social Media Team Member | Google Developer Group(GDG), Bogor 2025

- Strategized digital campaigns to evangelize Google technologies, achieving 60% growth in membership and 10% increase in engagement by analyzing audience data.
- Facilitated events connecting local developers with industry experts and tech trends

Projects

Mekari Jurnal Middleware | Golang, REST API, JSON

November 2025 | PT. Prestise Sportindo Utama - South Jakarta

- Developed a high-performance middleware using Golang and Goroutines to synchronize bulk transaction data between 'Book & Go Admin' and Mekari Jurnal without system blocking.
- Implemented HMAC-SHA256 authentication to secure API communication, ensuring 100% data integrity and preventing unauthorized access to financial records.

Booking Management System | Golang, Nuxt.js, PostgreSQL

December 2025 | Broskydive - Cirebon

- Architected a high-concurrency booking engine using Golang and PostgreSQL, implementing mutex locking to prevent race conditions and ensuring zero downtime during peak traffic.
- Built a Nuxt.js (SSR) system for real-time content control and automated revenue tracking.

Iris-kepk (Ethical Clearance System) | Laravel, Tailwind, MySQL

September 2025 | University of Muhammadiyah Jakarta(UMJ)

- Engineered a full-stack research ethics system using Laravel and Tailwind, replacing manual processes with a fully digital workflow for UMJ.
- Crafted a modern UI using Tailwind CSS to streamline navigation and enhance user experience.

Education

D4 - Teknologi Rekayasa Perangkat Lunak | Politeknik IDN Bogor

2023 – present

Certifications

- Making Flutter Application by **Dicoding**
- Basic and Intermediate Go-lang by **HackerRank**
- Cloud and Gen AI AWS by **Dicoding**
